Aim
Solving linear equations.

Calculator objectives
By the end of this unit, you should be able to:
• Use the linSolve command to solve linear equations

Contents
Using the \texttt{linSolve()} command

Press the catalogue button, and scroll down to \texttt{linSolve}.

Use the wizard to give the number of equations and the variables being used.

The template is pasted into a Calculator page. Enter the system of equations into the boxes provided.

Press enter and you are done!

The \texttt{linSolve} command works with any linear system of equations (not just 2 equations with 2 unknowns); just define the variables in the wizard!
